Bar Enhancements Add-In for Microsoft Dynamics RMS

FEATURES

TIP RECEIPT

Using a custom button located right on the POS window, your cashiers will be able to print receipts for sales without needing to close them out first. This "tip receipt" includes a line so the customer can give a tip and the tip can be added to the sale.

EASILY MANAGE OPEN TABS

After a cashier rings up an order they can store it in a tab with the customer's name as a reference. When the customer comes back you can easily retrieve their tab, add items to their order and save their tab again.

COMPLETE BAR EXPERIENCE

When the customer is ready to close out an order, the cashier can easily retrieve their tab, print out a tip receipt, add a tip to the sale and close out the order.

PUT IT ON YOUR TAB? NOW RMS CAN.

You like the point of sale capabilities in RMS, but need more functionality to make it work for your bar, lounge, or cafe?

With InterDyn LANAC Technology's Bar Enhancements package for Microsoft Dynamics RMS, you can manage customer bar tabs and record tips on your sales. Within the POS screen, cashiers have easy-to-use buttons to access this functionality right at their fingertips.

Having the ability to print a tip receipt without closing the order allows cashiers to charge tips to a customer's credit card without the hassle of ringing up a second transaction.

Very affordable! Call or email today for pricing. Reseller opportunities available.
